

## The LEGACY FAMILY of Quality Products

### LEGACY I

4 slot expansion, power supply and cabling. Room for half height floppy or hard disk accepts any L-Bus card.

### LEGACY II

Legacy I + second disk drive and floppy controller accepts any L-Bus card.

### LEGACY III

Legacy I with 10mb half height hard disk and interface cards. May add an additional 2 physical hard disk drives to scheme. Accepts any L-Bus card.

### When you choose LEGACY...

By expanding your PCjr with any of the above systems and adding memory, you can effectively achieve PC compatibility. Legacy quality is built into every product, and provides superior design and durability.

More for your investment.  
More for your PCjr.

LEGACY  
TECHNOLOGIES

## The L-Bus. The Power in every LEGACY.

### EXP Series

A premier L-Bus card offering 64k expansion and up to 256k on each memory card. Four rows of pin one refresh memory can provide total memory expansion within the Legacy of 512k. This can be achieved by placing 2 fully populated memory cards into any Legacy system.

The next generation of EXP cards will contain 256k RAM chips. This means you will be able to have one memory card with 256k or optional 512k.

Software is included with this card for RAM disk usage.

### CPS

The CPS is another L-Bus card — easily plugged into any of the four expansion slots. It provides a battery backed up clock and calendar. This software allows you to set the system with exact time and date, at power-up time.

The CPS card has a standard IBM parallel printer port which can be installed as your system's primary or secondary printer port. Software provided allows you to partition up to 64k of additional memory to be dedicated as a print spooler. This is a flexible program that allows you to use your computer while the printer completes its printing.

### Hard Disk L-Bus Card

The hard disk interface system is standard in all Legacy III series products and consists of two separate printed circuit cards. The first and most important is the Legacy L-Bus Card, which allows the PCjr to communicate with the hard disk through the second printed circuit card. This second card is a hard disk controller card attached to the hard disk.

This offers the most expandable system on the market. In fact this hard disk interface system can control up to 3 hard disks, providing more power for the price.

Self-booting can be performed once the hard disk is formatted and DOS installed.

Software can be installed in the same manner as on the PC-XT.

## A LEGACY Exclusive — The 4 Slot L-Bus

The key to your future.

The L-Bus is a multi-purpose expansion bus containing 80 pins for extended function boards. All 60 of the original PCjr's bus lines are present plus 20 additional pins provided by Legacy for upcoming technology and industry specific applications. These 20 additional lines include 8 more data bus lines which will allow a 16 bit processor to function on the L-Bus.

## Future Products

Legacy Technologies specializes in expansion products for the IBM PCjr. New products are now being developed and will be introduced to the market as they are perfected and tested. Legacy Technologies will continue to offer quality PCjr support products in the future.

## Product Availability

Legacy products are available world-wide through computer dealers and Legacy Distribution Channels. If your dealer does not have a particular Legacy product, please contact us. For pricing contact your local dealer.

## Corporate, OEM, and University Needs.

Legacy is willing and able to help organizations with their computer enhancement needs. Contact Legacy Systems Division for further details.

## Warranty

Legacy provides a **90-day** conditional warranty on all products and 1-year on disk drives. Extended warranty available for a nominal fee. This warranty is renewable.

## Compatibility & Software

Legacy products provide 100% PC compatibility for programs written within DOS and BIOS constraints. Flexible software capabilities allow for RAM Disks, Print Spoolers, System Clocks and more. Legacy turns the PCjr into a powerful and capable computer.
